

Tips for Building a Pond

First of all, it is important to select an area to balance back yard so it can be proportional to make element so you don't need to walk to far to enjoy and feed your fish. Also select a size to allow for fish growth.

Base of the pond you need to install a bottom drain additional jets and Settlement tank before going to the filter. This is recommended in case you need to go on vacations; you don't need to worry about cleaning.

A settlement tank stops debris from going into the filter. (This is one of the best solutions for maintaining your pond)

Installing a bottom Drain with air diffuser gives oxygen to your pond and adding a Waterfall will give more oxygen to your pond keeping your fish healthy; in case your pump needs to be serviced.

An Ultraviolet Sterilizer (UV) is one of the last piece of equipment that is necessary for your pond. Installing a UV will help kill bacteria and parasites, that way your fish will not get sick.

Build a Pond the correct way, it will give you more time to enjoy.

If you have any questions, please have a blue print drawing so we can help you select the correct equipment.
